- 1 Introduction
- 2 Data Source
- 3 Analysis
- 4 Conclusion

#### Introduction

#### Goal of the study:

- Give a descriptive view of social dialogue regimes.
- Understand the link with regions.
- Based on ILO conventions 87 et 98.
  - Convention 87: condition for trade union independence and rights to industrial action.
  - Convention 98: relationships between trade union and employer organizations and condition for collective bargaining.
- Show how implicative analysis complement more classical exploratory data analysis results.

# Study

#### Project "Social Dialogue Regimes"

- Financially supported by GIAN Fundation<sup>1</sup>.
- University of Geneva.
- University of Lyon 2.
- International Institut for Labour Studies (ILO).

#### Project goal:

- Get new insight on Social Dialogue Regimes.
- Understand the socio-economic outcomes and determinant of social dialogue regimes.

- 1 Introduction
- 2 Data Source
- 3 Analysis
- 4 Conclusion

#### **Data Source**

- Text mining results.
- Based on CEACR report on each convention.
- Predict the probability of the mention of a violation in the report.
- Six types of violations for convention 87 and 5 for convention 98.

# Key concept

|                       | Convention 87  |  |  |  |
|-----------------------|--|--|--|--|
| <i>V</i> <sub>3</sub> | Right to establish and join workers' organisations   |  |  |  |
| <i>V</i> <sub>4</sub> | Trade union pluralism  |  |  |  |
| <b>V</b> 6            | Election of representatives / Eligibility criteria   |  |  |  |
| <b>V</b> 7            | Organisation of trade union activities   |  |  |  |
| <i>V</i> <sub>8</sub> | Approval and registration of workers' organisations  |  |  |  |
| <b>V</b> 9            | Restrictions on the right to industrial action   |  |  |  |
|                       | Convention 98  |  |  |  |
| <i>W</i> <sub>1</sub> | Anti-union discrimination  |  |  |  |
| <b>W</b> <sub>2</sub> | Acts of interference   |  |  |  |
| <b>W</b> 5            | Right to collective bargaining   |  |  |  |
| <b>W</b> <sub>6</sub> | Designation of bargaining partner / representative trade union                                 |  |  |  |
| <i>W</i> <sub>8</sub> | Negotiable issues and substantive outcomes of collective bargaining / Permissible restrictions |  |  |  |

### Error rates (convention 87)

| Key Concept (violation) | Learning cross-validation error rate error rate std err |       | Test sample (size 21) number of errors |   |
|-------------------------|---|-------|--|---|
| V <sub>3</sub>          | 14.10%  | n.a.* | n.a.*                                  | 3 |
| $V_4$                   | 5.13%   | 5.13% | 2.50%                                  | 0 |
| <i>V</i> <sub>6</sub>   | 12.82%  | 14.1% | 3.94%                                  | 4 |
| <i>V</i> <sub>7</sub>   | 15.38%  | n.a.* | n.a.*                                  | 7 |
| <i>V</i> <sub>8</sub>   | 7.69%   | 7.69% | 3.01%                                  | 4 |
| <b>V</b> 9              | 2.56%   | 2.56% | 1.79%                                  | 2 |

<sup>\*</sup>Cross-validation is not available for  $v_3$  and  $v_7$ , because first split is enforced.

## **Data Recoding**

- Violation are not always mentioned.
- We do not have a report for each year.
- We need to look at a period.
- Data recoded using maximum predicted probability of violation for period 1997-2002.

#### **Convention 87**

| Key concept           | Percentage |
|-----------------------|------------|
| <i>v</i> <sub>3</sub> | 36.9%      |
| <i>V</i> <sub>4</sub> | 22.7%      |
| <i>V</i> <sub>6</sub> | 31.9%      |
| <b>V</b> <sub>7</sub> | 23.4%      |
| <i>V</i> <sub>8</sub> | 28.4%      |
| <b>V</b> 9            | 61.0%      |

- 1 Introduction
- 2 Data Source
- 3 Analysis
- 4 Conclusion

- 3 Analysis
  - Typology of Countries
  - Factorial Multiple Correspondence Analysis
  - Graph of Implication Between Types of Violation
  - Hierarchical Clustering of Violations

## Typology of Countries

- We seek to identify systems of violations.
- We used a two stage approach :
  - Extraction of principal factor of a multiple correspondence analysis.
  - Agglomerative hierarchical clustering with Ward criteria.

# Typology of Countries

|                                | Clusters                                  |        |        |        |        |       |
|--------------------------------|---|--------|--------|--------|--------|-------|
| Type of violation              |   | 1      | 2      | 3      | 4      | Total |
| /3                             | Right to establish                        |        |        |        |        |       |
|                                | and join workers' organ.                  | 0%     | 38.9%  | 51.1%  | 81.5%  | 36.9% |

- 4 Conclusion

#### Conclusions

#### About "Social Dialogue Regimes" :

- We identified different kind of social dialogue regimes.
- $\mathbf{v}_9$  is implied by every type of violation.
- Organizational violations are closely linked.

#### From a methodological point of view:

- Importance to look at implication between negative indicator if it make sens.
- Robustness of hierarchical violation clustering

Thank you for your attention!
